Profile Overview

Computer Science student at Multimedia Nusantara University with practical experience in web development and a deep interest in cybersecurity and stock investment. Skilled in building and maintaining web applications with clean, scalable code. Passionate about exploring data-driven technologies, especially in security and financial domains, to uncover meaningful insights. Adept at working in teams, with strong soft skills including leadership, critical thinking, and collaboration. Always eager to learn and adapt to emerging technologies in the tech and finance landscape.

Education

Universitas Multimedia Nusantara, Informatics

july 2022 – august 2026
(Expected)

Experience

Intern Fullstack Web Developer, Dinas Perhubungan Tangerang Selatan

Jan 2025 – June 2025

During my internship as a Fullstack Web Developer, I was responsible for designing and developing a fully dynamic company profile website for the Department of Transportation. I began by creating the initial UI/UX design using Figma and designing the database structure. The entire website content was made dynamic through the integration of a custom content management system (CMS) using Filament, allowing administrators to manage data and content without modifying the codebase. Using Laravel, PostgreSQL, React, and Tailwind CSS, I built a responsive and user-friendly web application that effectively represents the organization's profile and services.

Website Division, UMN TV

Still On-going

As a Fullstack Web Developer in the Website Division at UMN TV, I am responsible for designing and developing internal web tools that support the organization's media and content management processes. I take the lead in UI/UX design using Figma, ensuring intuitive and user-friendly interfaces. On the development side, I build and maintain web applications using Laravel, MySQL, React, and Tailwind CSS. I also develop custom content management systems using Filament to simplify backend workflows and improve content handling. My role involves close collaboration with the creative and production teams to ensure that the final product aligns with both functional needs and visual standards.

Logistics Coordinator of Infinite 2024, HMIF UMN

Aug 2024 – Dec 2024

As the Logistics Coordinator for Infinite 2024, I led a team of 25 individuals in managing event logistics. My responsibilities included streamlining supply chain processes for event materials and ensuring everything was delivered efficiently and on time. I created detailed logistics plans covering schedules, routes, and resource allocation to support the overall event operations.

Logistics Coordinator, PPIF2024

Jan 2024 – Sept 2024

In this role, I led the logistics division for PPIF2024 and collaborated closely with other event teams to ensure cohesive and effective execution. I designed and executed logistics strategies involving scheduling, routing, and resource management to meet the event's operational needs.

Projects

Genshininfo

github.com/NomieC/genshininfo

- Developed library and guide website for Genshin Impact Community as Front-end engineer.
- Tools Used: HTML/CSS, Javascript, Next.js, Chakra UI.

ClosetWear

github.com/NomieC/closetwear

- Developed clothes catalog website according to client's request as implementing CRUD, making admin dashboard, and Database.
- Tools Used: HTML/CSS, Javascript, PHP, Laravel, Blade, Mysql.

Tambal

github.com/RifqiArief/TAMBAL

- Developed Mobile Application that is devoted to increasing the sales figures of vehicle workshop owners and digitizing the workshop system.
- Tools Used: Figma, Android Studio, Kotlin, Firebase.

Game Development

github.com/NomieC/UAS_CGA

- Developed a vampire based game in 2.5D perspective for final exam.
- Tools Used: Unity, Blender, C#.

Web Portfolio

Portfolio

- Developed a portfolio project to showcase all my project.
- Tools Used: Vitejs, Reactjs, HTML/CSS, Tailwind.

Competition

Arkavidia CTF, Participant

2025

This was my first experience participating in a Capture The Flag (CTF) competition, where I joined as part of a two-person team. Arkavidia CTF gave me a solid introduction to Jeopardy-style challenges and allowed me to explore key areas in cybersecurity such as cryptography, reverse engineering, and exploitation. It was a valuable and eye-opening experience that sparked my enthusiasm to delve deeper into the world of CTFs and cybersecurity.

Google CTF, Participant

2025

Participating in the Google CTF was a mind-opening experience that deepened my understanding of the CTF world. While the practice challenges provided by Google felt relatively easy and approachable, the actual competition presented a significant leap in difficulty. This contrast helped me realize the complexity and depth of real-world cybersecurity challenges, and motivated me to further sharpen my problem-solving and technical skills.

Skill

Languages: Indonesia (Native), English (Secondary)
